

Charging Solution

Autopia ↑

Charge at home, and bundle it into your lease.

Home charging guidance and access to charging support can be bundled into your lease.

Guidance on the right charger

Most electric and plug-in hybrid drivers do the vast majority of their charging at home, overnight. We'll help you work out what that looks like for your car and your driveway — the charging speed your vehicle can actually accept, whether your home is single or three phase, and whether a socket or tethered-cable unit suits how you park.

Installed by qualified electricians

Supply and installation is handled by licensed installers, including the site check, switchboard and circuit work, and testing and certification on completion.

Bundled into your novated lease

Rather than paying for the charger up front, your charging solution can be packaged with the vehicle so it's covered by your regular lease payments — alongside the car, and subject to eligibility and your employer's policy.

Charging away from home

We can also arrange access to public charging support, so longer trips and days without a home charge are covered.

Worth checking before you order

- Off-street parking within cable reach of a wall or post
- Available capacity at your switchboard
- Single-phase or three-phase supply
- Whether you rent, or need body corporate approval
- Existing or planned rooftop solar
- The maximum AC charge rate your vehicle accepts

Charge at home

Wake up to a full battery, charged overnight.

Supply and install

Site check, installation, testing and certification.

One lease payment

Packaged with the vehicle, subject to eligibility.

Charger models, installation requirements and public charging inclusions vary by vehicle, property and employer policy. Eligibility to include charging in a novated lease, and its tax treatment, should be confirmed with Autopia and your own tax adviser before you order.
